The cDNA vector was circularized with E. coil DNA ligase after digestion of converted to a DNA strand by Okayama-Berg method. The competent cells E. coil Toplor by electroporation method. The competent cells E. coil Toplor by electroporation of first competent cells E. coil Toplor by electroporation dilbrary, the abundant cDNAs were selected and amplified by Dromotor as 5' primer and N(dT)14 as 3' primer. The PCR biotinylated single stranded RNA by in vitro transcription antisense single stranded cDNAs probes were hybridized with hiberary and incubated with avidin-gel. After removing libraries were constructed by the method are single stranded cDNAs probes were hybridized with probes were hybridized with hiberary and incubated with avidin-gel. After removing libraries were constructed by transformation of the electroporation method."

```
This invention relates to an antisense compound encoding Fas, CC Fas ligand, or Fas associated protein-1 (Fap-1). The inhibition of CC Fas mediated signalling is thought to be immunosuppressive, antiinflammatory, hepatotropic, cytostatic and vasotropic.

CC Antisense oligonucleotides were designed to target human Fas.

CC Oligonucleotides were synthesised as chimeric oligonucleotides for treating an animal having an autoimmune or complete the control of the control o

                                                                                                                                                                                                                                                                                                                                                                                                                                     AX A novel DNA segment (AAT34162) has an isolated sequence region code fixed as the Fas gene promoter region. This includes a number code defined as the Fas gene promoter region. This includes a number code fixed as the Fas gene promoter region. The protein leader peptide code is also included. The DNA segment was isolated from a human fas cDNA code is also included. The DNA segment was isolated from a human fas cDNA code is also included. The DNA segment was isolated from a human fas cDNA code is also included. The DNA segment was isolated from a human fas cDNA code is also included. The DNA segment was isolated from a human fas cDNA code is also included the replacement of the placement of the placement of the placement of the placement of the structural code corresponding to nt 23-346. It can be combined with a structural placement of the promoter region can be used corresponding to nt 23-346. The promoter region can be used complete that the gene is under the transcriptional control of the code gene so that the gene is under the transcriptional control of the corresponding to nt 23-346. The promoter region can be used complete so that the gene expression, e.g. in tumour or immune cells, as code is also included apoptosis disorders such as complete the transcriptions of treating Fas-mediated apoptosis disorders such as code maingnancies and autoimmune diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           protein_bind

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences genes which are modified by the methylation of immune system disorders, can be used in the diagnosis and treatment of immune system disorders, and can be used in the diagnosis and treatment of immune system disorders, and can be used in the diagnosis and treatment, neovascular glaucoma and including eye diseases such as retinopathy, neovascular glaucoma and including eye diseases such as retinopathy, neovascular glaucoma and including eye diseases such as retinopathy, neovascular glaucoma and including eye diseases such as retinopathy, neovascular glaucoma and including eye diseases such as retinopathy, neovascular glaucoma and including eye diseases such as retinopathy, neovascular glaucoma and including eye diseases such as retinopathy, neovascular glaucoma and including eye diseases such as retinopathy, neovascular glaucoma and including eye diseases such as retinopathy, neovascular glaucoma and including eye diseases such as retinopathy, neovascular glaucoma and including eye diseases such as retinopathy, neovascular glaucoma and including eye diseases such as retinopathy, neovascular glaucoma and including eye diseases such as retinopathy, neovascular glaucoma and including eye diseases such as retinopathy.

  The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences and the diagnosis and treatment of immune system disorders, macular degeneration, arteriosclerosis, anaemia, neovascular glaucoma and rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.

CC can be used in disgnostics and research, such as for treatment and disorders, industries of colon cancer antigens, given table, cardioactive, muscular; can be used in gene therapy. The colon cancer antigens can have cytostatic, cardioactive, muscular; colon cancer antigens can have cytostatic, cardioactive, muscular; colon cancer antigen polymuclectides, and can be used in gene therapy. The colon cancer antigen polymuclectides, and can be used antibodies to the proteins are useful for the prevention, colon cancer antigen polymuclectides, and cancer antigen polymuclectides, and colon cancer antigen polymuclectides, colon cancer. The colon cancer and cancer. The proteins and chisquosis of colon disorders, such as colon cancer. The colon cancer and cancer colon cancer and cancer colon cancer. The proteins colon cancer and disorders, muscular disorders, neural disorders, immune colon cancer disorders, reproductive disorders, infectious gystem disorders, muscular disorders, ancounted infectious and cardiovascular disorders. AAC98764 to AAC98772 and cancer cancer and cardiovascular disorders. AAC98764 to AAC98772 and cancer and cardiovascular disorders. AAC98764 to AAC98772 and cancer and cardiovascular disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAC98177 standard; cDNA; 859 BP.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Krammer P, Mueller-Schilling M, Oren M;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (DEKR-) DEUT KREBSFORSCHUNGSZENTRUM.
                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention describes a novel p53-binding region of a human CD95 receptor DNA molecule. The p53-binding region, or a vector containing it, can be used to screen for apoptosis-modulating substances a potentially useful for cancer chemotherapy. This sequence represents a potentially useful for cancer chemotherapy. Which contains a p53 binding fragment of the human CD95 receptor intron 1 which contains a p53 binding region described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     WPI; 2000-162245/15.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            2254 ÇTGGT 2258

The specification describes antisense compounds which are targeted to the 5'-untranslated or 3'-untranslated region of start site, translational termination region of nucleic acid molecules encoding Fas, Fas associated protein 1, protein tyrosine expression of Fas, Fast or Fas associated protein 1, protein tyrosine expression of Fas, Fast or Fast in cells or tissues. They are used to treat autoimmune or inflammatory diseases such as hepatitis. They cannot not protein treat cancer, especially colon, liver or lumphoma
                                              Sequence 2551 BP; 826 A; 493 C; 508 G; 724 T; 0 other;

CC The present invention describes a polynucleotide library (I) useful in CC the molecular characterisation of a carrainoma, comprising a pool of CC polynucleotides or its subsequences which are either underexpressed in tumour cells, and correspond to any of the CC polynucleotide sequences chosen from the 468 sequences given in AB994010 (CC to AB94477. Also described: (I) a polynucleotide expressed or the prognosis or diagnostic of tumour, comprising (I) useful for CC (MI) differentially expressed polynucleotide sequences which are correlated with a cancer, involves obtaining a polynucleotide sample from CC a patient, and reacting the polynucleotide sample obtained with a probe CC of the polynucleotide sequences of (I), and cleating the polynucleotide sample obtained with a probe CC of the polynucleotide sequences of (I), and detecting the problemation of the problematic activities and can be used as anti-tumour senonded consisted in molecular characterisation of a carcinoma. (I) and (II) are

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This invention relates to an antisense compound encoding Fas, compared to the inhibition of CC Fas indiand, or Fas associated protein-1 (Fap-1). The inhibition of CC Fas mediated signalling is thought to be immunosuppressive, Fas mediated signalling is thought to be immunosuppressive, CC antiinflammatory, hepatotropic, cytostatic and vasotropic.

CC antisense oligonucleotides were designed to trarget human Fas.

CC Oligonucleotides were synthesised as chimeric oligonucleotides.

CC oligonucleotides were synthesised as chimeric oligonucleotides.

CC and are useful for treating an animal having an autoimmune or configuration of the allograft rejection, or ischemia reperfusion associated configuration apoptosis, allograft rejection, or ischemia are prevented by CC with apoptosis, allograft with the antisense oligonucleotide. The CC contacting the allograft with the antisense oligonucleotides. The contacting the allograft with the antisense oligonucleotides are used in diagnostics, therapeutics, prophylaxis CC oligonucleotides are used in diagnostics, therapeutics prophylaxis research research purposes. The present nucleotide sequence is CC useful for research purposes. The present nucleotide sequence is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      S

The invention describes genes (I) which are differentially regulated in CC sample comprising prostate tissue, which involves determining the number of the number is indicative of the probability that the sample comprises content at a subject having a prostate differentially regulated in the sample, where content in a subject having a prostate cancer. (I) Is useful for assessing a therapeutic or preventive content and in the sample comprises of the probability that the sample comprises content and interventially regulated in the sample comprises of target genes which are differentially regulated in prostate cancer. (I) is also useful for identifying agents that modulate a biological cells, which involves contacting a polypeptide differentially regulated in prostate cancer. (C (I) is also useful for identifying agents that modulate a biological cells, which involves contacting a polypeptide differentially-regulated in prostate cancer the test agent under conditions effective for cells with a test agent under conditions effective for the test agent to modulate a biological activity of the polypeptide, and conditions especially relating, assessing, monitoring, prognosticating, compression of the polypeptide, and conditions especially relating predisposition to diseases and conditions especially relating predisposition to diseases and concer, it is stage of development, the nature of genetic defect, etc. (I) is useful for assessing cancer e.g., to determine the type of cancer, its stage of development, the nature of genetic defect, etc. (C office overly (I) can also be used as target for therapy or drug useful in the polypeptide and thus conditions of specific binding partners of the polypeptide. (I) is conditional applications to treat prostate cancer. The canded office of the polypeptide and thus conditions and disease pathways and the delineation of conditions and disease pathways and the delineation of canded in prostate cancer. The pathways which are present conditions to the appressed in the capture of the pol

The present invention describes a method (MI) for determining a CC expression profile of one or more human toxic response genes to a cC expression profile of one or more human toxic response genes to a cC described: (1) an array comprising one or more polynuclectides selected to ABZ84764, or their fragments of at least 20 nucleotides selected tomologues; and (2) determining the expression profile of the gene putatively identified to be a cor a human subject to a exposing cells to a exposing cells to a exposure to a exposure of cells comparising; (a) exposing cells to an agent or industrial agent, and cexpression profile of the gene after exposure of cells comparising; (a) exposing cells to an agent or isolating the test gene comparing the test profile to the expression profile of a gene after comparing the test profile to the expression profile for a putatively identified to be a comparing the test profile to the expression profile of a gene after comparing the test profile to the expression profile of a gene with correct to a known toxic pharmaceutical or industrial agent, comparing the test profile to the expression profile of a gene with correct to a known toxic pharmaceutical or industrial agent, and comparing the test profile to the expression profile of a gene with correct to a known toxic pharmaceutical or industrial agent, and comparing the test profile to the expression profile of a gene with correct to a cellular, organ or system level. The arrays comprising the human correct compounds and chemicals.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WO9513701-A1
                                                                                                                                                                                                                                                                                   New nucleic acid encoding Pas protein without its trans-membrane region - and related vectors, transformed cells, transgenic animals, protein and antibodies, useful for control of Pas mediated apoptosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              15-NOV-1994;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                26-MAY-1995.
                                            mRNA was obtd. from human lymphocytes and PCR was used to make cDNA specific for Fas-delta-TM (i.e. Fas lacking the transmembrane region) mRNA. The PCR product was ligated into pBluescript and the recombinant plasmid was used to transfect E. coli DH5-alpha cells. recombinant plasmid was used to transfect E. given in AAQ93879. insert sequence of pBluescript-Fas-delta-TM is given in AAQ93879 (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                     WPI; 1995-200120/26.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      (see AAW98070). The invention provides a method for inhibiting a constitution of proinflammatory response in a cell mixture by administering an consuppressive agent which inhibits the proinflammatory activity of Fas ligand (Fast). In some embodiments, Fast is coadministered neutrophil cells. The method can be practised in vitro, ex vivo or concludes that inhibit endogenous fast include antisense conviction of transforming growth factor (TGP)-beta, the method can be practised in vitro, ex vivo or concludes that inhibit endogenous fast expression, soluble fast creeptors, ribozymes that inhibit the endogenous expression of conditions of transforming growth factor (TGP)-beta, the method can be used for treating diseases associated constitute fast signalling agents that such as constituted fast-mediated proinflammatory response, e.g. constitutes the invention also provides a method darchiritis and psoriasis. The invention also provides a method for identifying agents which conditions a fast, arimilarion of a proinflammatory response, e.g. conditions also provides a method for identifying agents which

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CC A cDNA library was prepared from polyA+ RNA from the human lymphoma CC cell line KT-3. The cDNA was ligated to BstXI-cut vector pCEV4 via CC BstXI linkers. The KT3 cDNA library was used to transfect monkey COS-CC Ab. The cells were "panned" on plates pre-coated with goat anti-Fas CC antibodies. The Fas-expressing cells adhered to the plates. CC Extrachromosomal DNA was prepared from adhered cells and used to transform E.coli vM100 cells. A 520bp XhoI-BamHI fragment from a CC Longest cDNA clone was designated pF58 and contains an ORF corresp. CC ci.e. human Fas antigen). CC (Updated on 25-MAR-2003 to correct PN field.)

                                                                                                                                                                                                                                                                                       AAQ95297 is the plasmid pF58 which contains the human Fas cDNA. The plasmid was used in the construction of an expression vector for the prodn. of recombinant soluble membrane proteins. The proteins can be used in antibody prodn. for the treatment and prevention of can be used in antibody prodn.
